Personal statement

I am a motivated and dedicated individual with a strong passion for computer science, software development, and web development. My core strengths include effective problem-solving and staying up to date with the latest technology trends. I excel in collaborative and dynamic environments, where I actively contribute my skills to create and implement innovative software and web solutions. I am driven to push the boundaries of what's possible in the digital world and thrive on the opportunity to create meaningful digital experiences that make a lasting positive impact.

Skills

- **Software Development:** Proficient in programming languages such as C#, Python, Java and experienced in designing, developing, and debugging software applications.
- **Web Development:** Actively exploring web development technologies, including HTML, CSS, JavaScript, and front-end frameworks such as React, to broaden my skill set and stay at the forefront of industry trends.
- **Problem-Solving:** Adept at identifying and solving complex technical challenges with a creative and analytical approach, ensuring optimal software performance and user satisfaction.
- **Teamwork**: Demonstrated capability to work collaboratively in group projects, respecting diverse perspectives and contributing to shared goals. Will actively listen to others' ideas and respond back in a clear and concise manner.
- **Time Management**: Strong organisational skills with the ability to manage tasks efficiently, meet deadlines, and prioritise responsibilities.

Education

The University of Liverpool
(September 2018 – July 2021)
- Bachelor of Science with Honours in Computer Science with Software Development – First Class

The City of Liverpool College
(September 2016 – July 2018)

- BTEC Level 3 Extended Diploma in IT – Overall D* D* D*

Saffron Walden County High School
(September 2009 – June 2014)

- 8 GCSEs, grade A-C

Additional Information

I have had some basic work experience at an organisation called PSS – Person Shaped Support while I was at university, at this place my task was to go around the building to help the employees install applications on their phones so that they were able to talk with each other and other general IT support tasks, this helped to develop my skills in communication with others as I had to demonstrate and explain how to install applications for their devices in a professional setting, I can use the experience gained from this to help better communicate with employees and clients.

Another brief work experience I had was volunteering at a library to help and teach the elderly or those little computer skills on how to use computers, such as things like how the mouse and keyboard works, how to send emails and how to print files, this experience helped me learn how to adapt my knowledge into layman's terms so that they would be able to understand as well as providing support to them by asking and answering any questions they had.
